

Anisha Alam

Major & Career: I'm currently a junior obtaining an Information Systems degree, and I'm taking steps to become and work as a data analyst after I graduate. I have been taking the majority of my business prerequisites in the past and have been learning new functions in my information science classes. I have gained many skills in Excel and am recently learning new coding languages that have been beneficial as I will apply them in the future for the career I strive to be in.

Technical Background: In the past, I have worked with a few of Microsoft's software programs and have utilized Word, Excel, and PowerPoint. I have learned new functions and designs in Excel with my IS classes and have recently learned the complexities of Microsoft Access. I have been learning C#, and in the past, I have taken classes with Python and JavaScript. I found these classes compelling and found it interesting how coding languages work. I've been able to use "F command" and shortcuts with my laptops and computers in the past as well, and I believe I know the workings of my laptop well.

About me: I am from Reno, Nevada but my parents are from Bangladesh and moved to New York for a few years. My parents decided to move to Reno when they were having my older brother and then eventually had me. I decided to stay at UNR because of the in-state tuition, and since we have a great study abroad program, I wanted to go abroad. This leads just a few of my favorite hobbies: I love traveling because of my parents and going abroad. I also enjoy reading, and I have been working as a manager at Barnes & Noble for the past 3 years. I love fashion and enjoy listening to music, especially going to concerts. I love the environment and care about sustainability. My dream is to work for a company (or create my own) that could incorporate all my interests, or be able to bring a small change to the world for the work I'll be able to do in the future.
